

BIO 241 - Human Anatomy & Physiology I

Demo syllabus for AI Policy Campus presentation

Instructor

Professor Jordan Lee

Email: jordan.lee@example.edu

Office Hours: Tuesday and Thursday, 2:00-4:00 PM, Science Building Room 210.

Course Overview

This course introduces human anatomy and physiology with emphasis on body organization, cells, tissues, the skeletal system, muscles, and basic homeostasis. Students should connect structure with function and use scientific vocabulary accurately.

Required Materials

Required textbook: Principles of Anatomy & Physiology, current course edition. Students should also bring access to the course learning platform and laboratory materials listed in class.

Important Dates

Quiz 1: October 6

Midterm Exam: October 28

Lab Practical: November 18

Final Exam: December 9

Grading

Exams 40% | Laboratory work 25% | Assignments 20% | Quizzes 10% | Participation 5%.

Attendance and Late Work

Regular attendance is expected. Late assignments may receive a deduction unless the student has arranged an approved extension with the instructor.

Artificial Intelligence Policy

Generative AI tools may be used for brainstorming, creating study questions, and explaining course concepts. Students may not use generative AI to write graded assignment answers or complete quizzes or exams. If an assignment has different AI instructions, the assignment-specific instructions apply. When unsure, ask the instructor before using AI.

Academic Integrity

Students are responsible for submitting their own work and following college academic-integrity requirements. Sources and outside assistance must be acknowledged when required.

Student Support

Students who need academic or accessibility support should contact the appropriate college support office and communicate with the instructor as early as possible.
